

Inhalt**Alphabetischer Index****Seitennummer**

Acyl-L-Carnitines	
• Native	50
• Deuterium Labelled	52
Bile Acids & Methyl Esters	152
Cholesterol & Esters	108
Coenzyme A & Fatty Acid CoA Esters	54
Conjugated Linoleic Acids (CLA)	
• Analytical Standards	20
• FFA/ Esters/ Triglycerides in bulk	29
Dicarboxylic Acids & Dimethyl Esters	116
Dolichols & Phosphates	148
Eicosanoids	48
Fatty Acids & Methyl Esters – straight chain	
• Saturated & Unsaturated	4
• EPA & DHA Esters in bulk	28
Fatty Acids - Unusual / Methyl Esters	
• Conjugated Polyene	20
• Odd-Numbered Polyunsaturated	22
• Other Unusual	24
Fatty Acids & Methyl Esters – methyl branched/ cyclopropyl	
• Phytanic & Pristanic – Native and Deuterium labelled	56
• Iso & Anteiso	57
• 10-methyl Branched	62
• Cyclopropyl	63
Fatty Acids & Methyl Esters – Oxygenated/ Oxylin related	
• Hydroxy	44
• Dihydroxy	46
• Epoxy	36
• Oxo	46
Fatty Acids & Methyl Esters – Hydroxy (synthetic)	64-68
• 2-Hydroxy	64
• 3-Hydroxy	66
• Omega-Hydroxy	69
• Other Microbiological	70

Fatty Acids – Deuterium labelled

- Perdeuterated 95
- α -Deuterated 97
- ω -Deuterated 98
- Polyunsaturated 99
- Miscellaneous 101

Fatty Acids – ^{13}C labelled 102

Fatty Alcohols 105

Gangliosides & Derivatives 142

Glycerides

- Monoglycerides - Saturated/ Unsaturated 71
- Diglycerides – Single/ Mixed Fatty Acids 76
- Triglycerides - Single/ Mixed Fatty Acids 84
- Triglycerides – ^{13}C -Labelled 103

Hydrocarbons

- Aliphatic 153
- Isoprenoid 157

Kits

- Fatty Acids/ Methyl Esters 157
- Glycerides 164
- Aliphatic Hydrocarbons 163
- Phosphoglycerides 165
- Phospholipids 164
- Plant Sterols 164

Larodan Reference Mixtures

- Glycosingolipid Mixtures 165
- FAME Mixtures 166
- Oil Mixtures 181
- Methyl Branched FAME Mixtures 177
- Glyceride Mixtures 182
- Mixed Lipid Mixtures 184
- Polar Lipids Mixture 188
- Polyprenol Mixtures 186
- Free Fatty Acid Mixtures 179
- n-Paraffin Mixture 188
- Fish Oil FAME Mixture 189

Metabolic Research Products

- Long Chain Fatty Acids – Deuteriumlabelled 101

• Acylglycines/ Miscellaneous – 13C/ Deuteriumlabelled	103
Oligoprenyl Phosphates	
Oxylipines	31
• Hydroperoxides	32
• Hydroxides	33
• Ketones	36
• Epoxides	37
• Diols	38
• Allene-Oxide-Synthase- -derived	38
• Divinyl-Ether-Synthase- -derived	39
• Epoxy Alcohol Synthase–/ Peroxygenase-derived	41
• Lyase-derived	44
• Others	45
D- <i>myo</i> -Phosphatidylinositol Phosphates	
Phospholipids	120
• Natural PC, PE, PI, PA, PG, CL, PS, LPC, LPE, LPI, LPG	120
• Semisynthetic GPC, PC, PE, PA, PG, PS, LPC, LPG	125
• Deuterium Labelled	100
• Di-O-Alkyl	131
Plant Leaf Lipids	145
Plant Sterols & Steryl Glucosides	145
Plasmalogens	124
Polyprenols & Monophosphates	146
Sialic Acid & Derivatives	143
Sphingolipids	
• Sphingosines	132
• Ceramides	134
• Cerebrosides	137
• Sphingomyelins	139
• Fluorescent	140
Wax Esters C12-C20 97-	109

Nomenclature – Geometrical Isomers

In this catalogue we use two systems to describe the geometry of structures having carbon-carbon double bonds (geometric isomers).

Cis/ trans denomination is used to indicate C=C configuration of common unsaturated fatty acids of natural origin, i.e. from vegetable and animal fats and oils.

A more distinct nomenclature, the *Z/E*-system, was introduced in the 1950's by Cahn, Ingold and Prelog. For fatty acids and derivatives *cis* is equivalent to *Z* and *trans* to *E*, which is not always the case for other kinds of molecules.

Fatty Acids & Derivatives

Saturated n-Fatty Acids (n-Carboxylic)

Bulk discounts are available on larger quantities. Other esters, such as ethyl esters can be offered on request.

Saturated and unsaturated fatty acids occur, as triglycerides, mainly in plants and animals, such as in oil bearing seeds and fruits, tallow, lard and marine oils.

In natural fats and oils, even numbered fatty acids are the predominant ones - odd numbered are rare.

Larodan and CPS provide a growing range of high purity fatty acids and esters for research and analytical purposes. In this catalogue you will find new lines of fatty acids and metabolites under special headings.

Im Katalog werden neben den Mengen die Bestellnummern angegeben

Saturated n-Fatty Acids – Gesättigte n-Fettsäuren

Propionic Acid

No. of C: 3:0 Mw: 74.08 Documentation: GC Purity: 99+%

Unusual Fatty Acids

Fatty acid biosynthesis by *de novo* pathways or by pathways involving elongation of preformed molecules takes place by successive addition of two carbons from either malonyl-CoA or acetyl-CoA, and this is the reason why the overwhelming part of naturally occurring fatty acids have even-numbered acyl chains. Furthermore, because of the specificities of acyl desaturases, most polyunsaturated fatty acids of natural origin possess two or more copies of the Zconfigured element (-CH=CH-CH₂-)_n. For this reason even the simplest of the naturally occurring polyunsaturated fatty acids, *i.e.* linoleic acid (n = 2), will possess a bis-allylic methylene group located between double bonds: (-CH=CH**CH**₂-CH=CH-CH₂-). The lowered carbon-hydrogen bond dissociation energy of this methylene group makes it unusually reactive and explains the susceptibility of polyunsaturated fatty acids to *e.g.* autoxidation and base-catalyzed isomerization as well as their conversions by enzymes like lipoxygenases, cyclooxygenases and conjugases.

In addition to the dioxygenase and monooxygenase classes of enzymes, which introduce molecular oxygen into fatty acids to produce the oxylipin family of compounds, acyl chains can be modified by a large number of unorthodox desaturases. Such enzymes are especially common in the plant kingdom and are frequently active during seed development. Examples are the desaturases which introduce the 5(Z) double bond in 5(Z),9(Z)-octadecadienoic acid (taxoleic acid) and 5(Z),9(Z),12(Z)-octadecatrienoic acid (pinolenic acid), the desaturase which convert linoleic acid into 9(Z)-octadecen-12-ynoic acid (crepenynic acid), and the conjugase-type of desaturases which catalyze the dehydrogenation of linoleic acid into α -leostearic, α -calendic and punicic acids. It should be noted that the fatty acids in this category are non-oxygenated, occur in esterified form in plant lipids, and are as a rule isolated together with conventional fatty acids. Larodan takes special interest in the isolation of uncommon fatty acids from natural origin and also applies synthetic methods for modification of existing fatty acids. In this way we can provide a collection of unusual fatty acids, most of which are not available from other commercial sources.

Conjugated Polyene Fatty Acids / Methyl Esters

Recent research has revealed new biological roles of Conjugated PUFAs, e.g. Conjugated Linoleic acid and alpha-Parinaric acid act as high affinity binding ligands and activators of peroxisomal proliferator-activated receptors (PPAR). Others (trienoic and tetraenoic acids) display potent cytotoxic activity in cell cultures. A review article on Conjugated PUFAs is available on our web site.

CLAs –Conjugated Linoleic Acids / Bulk

Linoleic acids occur naturally as "natural Octadienoic acid (9c,12c)" and related isomers, so called "Conjugated Linoleic Acid (CLA)" having double bonds in 9,11 or 10,12 positions (cis/trans).

CLA isomers have been shown to be biologically active, e.g. suppressing cancer diseases and inhibiting development of atherosclerosis.

Larodan offers selected CLAs for analytical and larger scale experiments (bulk). The analytical standards are listed in the Fatty Acid section.

CLAs in bulk – Free Fatty Acids – Methyl/ Ethyl Esters – Triglycerides

Oxylipins

Fatty acid hydroperoxides can be enzymatically produced in plants by lipoxygenase- or α -dioxygenase-catalyzed oxygenation. Further conversion by secondary enzymes results in an array of oxygenated derivatives belonging to the oxylipin family of compounds. The name "oxylipin" was introduced in 1990 as an encompassing term for fatty acid derivatives of all chain lengths formed by mono- or dioxygenase-catalyzed oxygenations. Although it is a general term which is unspecific for lengths of acyl chains, it has so far found most use to denote linoleic and linolenic acid-derived products in the plant fatty acid field.

Interest in oxylipins to a large part stems from their involvement in plant development and their role as defensive agents in plants attacked by fungi, insects and bacteria. The Larodan company has supplied oxylipins for a multitude of studies on plants oxylipins and is actively involved in research aimed at elucidating the antimicrobial effects of oxylipins as well as more specific projects dealing e.g. with the structures of complex lipids containing 12-oxophytodienoic acid and with the mechanism of the hydroperoxide lyase reaction. Many oxylipins are unstable and/or rapidly inactivated by metabolic degradation. Research at Larodan with the aim of obtaining oxylipin analogs with enhanced metabolic stability has recently resulted in a series of β -oxidation-stable 3-oxa oxylipins, and limited quantities of the precursor of such analogs, *i.e.* 3-oxalinolenic acid, is now available from Larodan.

The almost hundred different oxylipins provided by Larodan range from fatty acid hydroperoxides produced by lipoxygenases (LOX) to a multitude of derivatives generated from hydroperoxides by chemical transformations or by secondary plant enzymes such as allene oxide synthase (AOS), divinyl ether synthase (DES), hydroperoxide lyase (HPL), epoxy alcohol synthase (EAS) and peroxygenase (POX).

Eicosanoids

Eicosanoids (from gr. *icosa*, twenty) are oxygenated derivatives of 20-carbon fatty acids such as arachidonic acid and 5,8,11,14,17-eicosapentaenoic acid. Enzymatic formation of eicosanoids involves endoperoxide synthases, lipoxygenases or cytochrome P-450-containing monooxygenases. As a rule, the primary products of these enzymes are further modified by secondary conversions catalyzed by e.g. prostaglandin synthases, thromboxane A synthase, leukotriene A₄ hydrolase and leukotriene C₄ synthase. A second lipoxygenase-catalyzed oxygenation step can also take place. In this way a multitude of compounds belonging to the prostaglandin, leukotriene, lipoxin or resolvins subfamilies of eicosanoids are produced.

In recent years studies of the prostaglandin H₂ → prostaglandin E₂ conversion has led to the discovery of microsomal and cytosolic prostaglandin E synthases, and much effort is presently devoted to the development of inhibitors of these enzymes for use as antiinflammatory agents. Prostaglandin H₂, the substrate for prostaglandin E synthases, is chemically unstable, however, during the last five years Larodan has supplied reliable and carefully calibrated preparations of this eicosanoid to both pharma and academia. A short review of prostaglandin E synthases is available at the Larodan website.

In addition, the growing interest in the 15-lipoxygenase pathway has created a demand of its primary product, *i.e.* 15(S)-HPETE, as well as its secondary products such as epoxides, epoxyalcohols and dihydroxy derivatives. Larodan has started supplying this type of products and the number of structures is gradually growing.

Acyl-L-Carnitine Chlorides / Native & D-Labelled

L-Carnitine is known for stimulating fatty acid oxidation through various tissues. This process is reversible involving Coenzyme A-SH facilitating the transport of fatty acids across mitochondrial membranes.

Deuterium labelled Acyl-L-Carnitines are primarily of interest in metabolic research.

Methyl Branched Fatty Acids and Methyl Esters – Native/ D-labelled

Larodan supplies a range of methyl branched fatty acids known as Iso- and Anteiso Fatty Acids , Phytanic Acid, Pristanic Acid and other microbiologically important fatty acids and their Methyl Esters .

Iso- and anteiso fatty acids occur in lipids originating from wool and butter fats, tobacco and bacterial lipids of special interest in microbiological and natural product applications.

Hydroxy Fatty Acids/ Methyl Esters

Racemic if not otherwise stated.

Hydroxy fatty acids are formed by metabolism of fatty acid and fatty acid oxidation.

2-Hydroxy fatty acids are important structural components in biologic substances, e.g. in glycosphingolipids.

3- Hydroxy fatty acids are biochemically generated by microorganisms. For Oxylipin related Oxygenated Fatty Acids - see under "Oxylipins".

Glycerides – Mono-/Di-/Tri- Synthetic

Triglycerides are the main components in lipids of various origins, e.g. oils and fats from plants and animals, in biological tissues and membranes. Besides their physiological role in human and animal metabolism and nutrition, glycerides are widely used in various technical applications.

Fatty Alcohols –Saturated (n-alkyl alcohols)

Fatty alcohols, i.e. n-alkyl chained alcohols, are used in the chemical technical industry as softeners and plasticisers.

Fatty alcohols occur in surface lipids in animals and plants - as free alcohols or esterified (wax esters).

Natural Phospholipids

Natural Phospholipids are isolated from plant or animal sources and purified to 98+% purity.

Our natural Phospholipids are delivered in an appropriate solvent. Bulk quantities are delivered as requested, e.g. neat. QC testing is done by TLC.

Sphingolipids

Sphingolipids are sphingosine derivatives having the C2 amino group linked to a fatty acid residue. When the C1 OH-group is linked to carbohydrate (mono-, oligosaccharides), the resulting structure becomes a Glycosphingolipid. Sphingomyelin is sphingosine having the C1 OH-group esterified to become a phosphorylcholine derivative. Gangliosides are sialic acid containing glycosphingolipids (see under Gangliosides). Our sphingolipids are of 98+% purity, i.e. free of proteins and peptides for direct use as standards or reagents.

Gangliosides & Related Derivatives

Gangliosides, sialic acid containing glycosphingolipids, are components of vertebrate cell membranes, where they are present as a large number of structures differing in the oligosaccharide and lipid moieties. Gangliosides show a strong amphiphilic character and interact with other lipid membrane components while the hydrophilic oligosaccharide chain interacts with soluble extracellular molecules and with the hydrophilic portion of other membrane components.

Gangliosides appear to play an important role in the modulation of cell functionality, acting as receptors for toxins and participating in the biotransductions of membrane mediated information.

Polyprenols / Polyprenylmonophosphates

POLYPRENOL DOLICHOL

Molecular structures

Polyprenols - with respect to the structure are classified into three groups: di-*trans*-poly-*cis* (ω -t2-cn-3-OH), tri-*trans*-poly-*cis* (ω -t3-cn-4-OH) and all-*trans* (ω -tn-1-OH) alcohols with an ω -residue in *cis/trans* configuration and α -*cis* terminal residue.

Dolichols - have di-*trans*-poly-*cis*-saturated (ω -t₂-cn-4-s-OH) structure with an ω -residue in *cis/trans* configuration and α -saturated terminal residue.

Polyprenols, Dolichols, Oligoprenols & Phosphates

Polyisoprenoid alcohols constitute a group of hydrophobic polymers commonly occurring in nature. They consist of from less than 10 up to more than 100 isoprene residues linked head-to-tail, having an hydroxy group at one end (α -residue) and a hydrocarbon ω -end. Hydrogenation of the double bond in the α -residue generates dolichols (syn. dihydropolyprenols) in contrast to α -unsaturated polyprenols (syn. dehydrololichols). The geometric isomery of the double bonds within the polyisoprenoid alcohol molecule is strictly controlled - three subgroups are commonly found in nature: (i) di-*trans*-poly-*cis*, (ii) tri-*trans*-poly-*cis* and (iii) all-*trans*.

Biological roles – examples

Phosphorylated polyisoprenoid alcohols play a biological role as cofactors in the biosynthesis of glycoproteins and bacterial peptidoglycan. Protein glycosylation in plant systems has also been studied demonstrating that dolichyl rather than polyprenyl phosphate is thought to serve as a lipid carrier. Polyprenyl and/or dolichyl phosphates are postulated to serve as donors of isoprenoid groups during protein prenylation in rat liver, spinach and *Arabidopsis*. In the latter case polyisoprenylated proteins were highly enriched in the light vesicle fraction of the cells.

Dolichyl phosphate has been found to induce apoptosis in human leukemia cells and changes in mitochondria were shown to initiate this process. In bacterial cells it has been shown that undecaprenyl diphosphate linked to the complex structure of peptidoglycan building blocks (Lipid II) is the intrinsic component of the pore formed by the antibiotic nisin thus modulating its antimicrobial efficacy.

Polyisoprenoid alcohols and their phosphates are known to modulate the properties of lipid membranes (they increase the fluidity and permeability, promote formation of reversed micelles) as proved in model membranes.

Larodan Kits

Fatty Acid & Fatty Acid Methyl Ester Kits

FA Kit 10

Order no. 50-1010

Fatty Acids C4:0-C26:0

23 x 100mg

Kit components:

100 mg Butyric Acid

100 mg Pentanoic Acid

100 mg Hexanoic Acid (Caproic Acid)

100 mg Heptanoic Acid

100 mg Octanoic Acid (Caprylic Acid)

100 mg Nonanoic Acid (Pelargonic Acid)

100 mg Decanoic Acid (Capric Acid)

100 mg Undecanoic Acid

100 mg Dodecanoic Acid (Lauric Acid)

100 mg Tridecanoic Acid

100 mg Tetradecanoic Acid (Myristic Acid)

100 mg Pentadecanoic Acid

100 mg Hexadecanoic Acid (Palmitic Acid)

100 mg Heptadecanoic Acid (Margaric Acid)

100 mg Octadecanoic Acid (Stearic Acid)

100 mg Nonadecanoic Acid

100 mg Eicosanoic Acid (Arachidic Acid)

100 mg Heneicosanoic Acid

100 mg Docosanoic Acid (Behenic Acid)

100 mg Tricosanoic Acid

100 mg Tetracosanoic Acid (Lignoceric Acid)

100 mg Pentacosanoic Acid

100 mg Hexacosanoic Acid (Cerotic Acid)

FA Kit 11

Order no. 50-1011

Fatty Acids even no C6:0-C22:0

9 x 1g

Kit components:

1 g Hexanoic Acid (Caproic Acid)

1 g Octanoic Acid (Caprylic Acid)

- 1 g Decanoic Acid (Capric Acid)
- 1 g Dodecanoic Acid (Lauric Acid)
- 1 g Tetradecanoic Acid (Myristic Acid)
- 1 g Hexadecanoic Acid (Palmitic Acid)
- 1 g Octadecanoic Acid (Stearic Acid)
- 1 g Eicosanoic Acid (Arachidic Acid)
- 1 g Docosanoic Acid (Behenic Acid)

FA Kit 12

Order no. 50-1012

Fatty Acids odd no C7:0-C23:0, 9 x 100mg

Kit components:

- 100 mg Heptanoic Acid
- 100 mg Nonanoic Acid (Pelargonic Acid)
- 100 mg Undecanoic Acid
- 100 mg Tridecanoic Acid
- 100 mg Pentadecanoic Acid
- 100 mg Heptadecanoic Acid (Margaric Acid)
- 100 mg Nonadecanoic Acid
- 100 mg Heneicosanoic Acid
- 100 mg Tricosanoic Acid

FA Kit 13

Order no. 50-1013

Fatty Acids, long chained C20:0-C26:0

7 x 100mg

Kit components:

- 100 mg Eicosanoic Acid (Arachidic Acid)
- 100 mg Heneicosanoic Acid
- 100 mg Docosanoic Acid (Behenic Acid)
- 100 mg Tricosanoic Acid
- 100 mg Tetracosanoic Acid (Lignoceric Acid)
- 100 mg Pentacosanoic Acid
- 100 mg Hexacosanoic Acid (Cerotic Acid)

FA Kit 14

Order no. 50-1014

Fatty Acids, unsat. C14:1-C24:1

9 x 100mg

Kit components:

- 100 mg Myristoleic Acid (9c)
- 100 mg Palmitoleic Acid (9c)
- 100 mg Oleic Acid (9c)
- 100 mg Linoleic Acid (9c, 12c)
- 100 mg Linolenic Acid (9c, 12c, 15c)
- 100 mg 11c-Eicosenoic Acid
- 100 mg Arachidonic Acid (5c,8c,11c,14c)
- 100 mg Erucic Acid (13c-Docosenoic Acid)
- 100 mg Nervonic Acid (15c)

FAME Kit 20

Order no. 50-1020

Methyl Esters C4:0-C26:0

23 x 100mg

Kit components:

- 100 mg Methyl Butyrate
- 100 mg Methyl Pentanoate
- 100 mg Methyl Hexanoate
- 100 mg Methyl Heptanoate
- 100 mg Methyl Octanoate
- 100 mg Methyl Nonanoate
- 100 mg Methyl Decanoate
- 100 mg Methyl Undecanoate
- 100 mg Methyl Dodecanoate
- 100 mg Methyl Tridecanoate
- 100 mg Methyl Tetradecanoate
- 100 mg Methyl Pentadecanoate
- 100 mg Methyl Hexadecanoate
- 100 mg Methyl Heptadecanoate
- 100 mg Methyl Octadecanoate
- 100 mg Methyl Nonadecanoate
- 100 mg Methyl Eicosanoate
- 100 mg Methyl Heneicosanoate
- 100 mg Methyl Docosanoate
- 100 mg Methyl Tricosanoate
- 100 mg Methyl Tetracosanoate

FAME Kit 21

Order no. 50-1021

Methyl Esters even no C6:0-C22:0

9 x 1g

Kit components:

1 g Methyl Hexanoate

1 g Methyl Octanoate

1 g Methyl Decanoate

1 g Methyl Dodecanoate

1 g Methyl Tetradecanoate

1 g Methyl Hexadecanoate

1 g Methyl Octadecanoate

Triglyceride Kits

Glyc Kit 32

Order no. 50-1032

Triglycerides C6:0-C20:0

10 x 100mg

Kit components:

- 100 mg Tricaproin (Trihexanoin)
- 100 mg Tricaprylin (Trioctanoin)
- 100 mg Tricaprin (Tridecanoin)
- 100 mg Trilaurin (Tridodecanoin)
- 100 mg Trimyristin (Tritetradecanoin)
- 100 mg Tripalmitin (Trihexadecanoin)
- 100 mg Tristearin (Trioctadecanoin)
- 100 mg Triolein (9c)
- 100 mg Trilinolein (9c, 12c)
- 100 mg Triarachidin (Trieicosanoin)

Phosphoglycerides – Phospholipids Kits

Phosphoglycerides Kit

Order no. 37-5000

9 single items

Kit components:

- 10 mg PS (brain, bovine)
- 10 mg PC (egg)
- 10 mg PE (egg)
- 3 mg PI (wheat germ (Na salt))
- 10 mg PA (egg PC)
- 10 mg Cerebrosides
- 10 mg LPC (egg) (neat)
- 10 mg Sphingomyelin
- 10 mg Sulfatides (bovine)-diagnostic grade (BSE tested)

Natural Phospholipids Kit

Order no. 37-0000

10 x 5 mg

Kit components:

5 mg Cardiolipin (CL), ammonium salt (bovine)

5 mg PS (brain, bovine)

5 mg Cerebrosides

5 mg Ceramide (saturated, unsaturated and α -OH fatty acids)

5 mg LPC (liver, bovine or porcine)

5 mg PI (liver, porcine)

5 mg PC (liver, bovine or porcine)

5 mg PA (egg PC)

Plant Sterols Kit

Order no. 60-1200

10 items as follows

Kit components:

5 mg Coprostanol

2 mg Esterified Steryl Glucoside, 98+% (soybean)

25 mg Ergosterol, 95%

100 mg Lanosterol 55%

25 mg Stigmasterol, 98+%

25 mg Plant Sterol Mixture

100 mg beta-Sitosterol 55%

100 mg Cholestanol

5 mg Steryl Glucoside, 98+% (soybean)

2 mg Desmosterol 90%

Larodan Reference Mixtures

Glycosphingolipid Mixtures for TLC

Purity: (components) 98+%.

TLC Mix 51

Equal weight %

Order no. 90-3051

25 mg /ml in Chloroform-Methanol 2:1 1 ml

Mixture components:

Cerebrosides

Sphingomyelin

Sulfatides (bovine)-diagnostic grade (BSE tested)

TLC Mix 53

Equal weight %

Order no. 89-3053

1 mg /ml in Chloroform-Methanol 2:1 1 ml

Mixture components:

Ceramide Trihexosides (CTH, Gb3)

Cerebrosides

Globosides (GL4, Gb4, globotetraosyl ceramide)

Lactosyl Ceramides Bovine (butter milk)

OIL Mixtures

The Oil Mixtures are based on two ranges of FAME Mixtures imitating the fatty acid profiles of natural Fats & Oils:

The FO range (revised AOCS 's Tentative Method CE 1-62)

Natural Oil Mix range imitating specific Fats & Oils - see also our range of natural LAR Oils

The FO Mixtures are recommended for the following Fats & Oils:

90-1103 Mixture FO 3 Peanut, rape and mustardseed oils

90-1104 Mixture FO 4 Olive, teaseed and neatsfoot oils

90-1105 Mixture FO 5 Coconut, palm kernel, babassu and ouri-curi oils
(laurics)

90-1107 Mixture FO 7 Rapeseed oil

Order no. 90-3034

Delivered neat 100 mg

Mixture components:

C 18:1 Oleic Acid (9c)

C 18:1 Methyl Oleate (9c)

C 18:1 (Fatty acid) Monoolein

C 18:1 (Fatty acid) Diolein (9c)

C 18:1 (Fatty acid) Triolein (9c)

TLC Mix 40

Equal weight %

Order no. 90-3040

Delivered in solution 100 mg

Mixture components:

C 18:1 Oleic Acid (9c)

C 18:1 (Fatty acid) Triolein (9c)

PC (egg)

Cholesterol

C 18:1 Cholesteryl Oleate

TLC Mix 42

Equal weight %

Order no. 90-3042

Delivered in solution 25 mg

Mixture components:

C 18:1 Oleic Acid (9c)

C 18:1 (Fatty acid) Triolein (9c)

Ceramide (saturated, unsaturated and α -OH fatty acids)

Cholesterol

C 18:1 Cholesteryl Oleate

TLC Mix 43

Equal weight %

Order no. 90-3043

Delivered in solution 100 mg

Mixture components:

C 18:1 Methyl Oleate (9c)

C 18:1 (Fatty acid) Triolein (9c)

Cholesterol

C 18:1 Cholesteryl Oleate

Fish Oil FAME Mixture

Approximative % composition by weight. All FAMES of 89-5550 are indicated on the GC supplied with this product.

Qualmix Fish S

Order no. 89-5550

50 mg

C 14:0 Methyl Tetradecanoate 7%

C 15:0 Methyl Pentadecanoate 3%

C 16:0 Methyl Hexadecanoate 13%

C 16:1 Methyl Palmitoleate (9c) 5%

C 18:0 Methyl Octadecanoate	3%
C 18:1 Methyl Oleate (9c)	10%
C 18:2 Methyl Linoleate (9c, 12c)	3%
C 18:3 Methyl Linolenate (9c, 12c, 15c)	2%

C 18:4 Methyl Octadecatetraenoate (6c, 9c, 12c, 15c)	1%
C 20:1 Methyl 11c-Eicosenoate	15%
C 20:4 Methyl Arachidonate (5c, 8c, 11c, 14c)	4%
C 20:5 Methyl Eicosapentaenoate (5c, 8c, 11c, 14c, 17c)	5%
C 22:1 Methyl Erucate (13c)	11%
C 22:4 Methyl Docosatetraenoate (7c, 10c, 13c, 16c)	2%
C 22:5 Methyl Docosapentaenoate (7c, 10c, 13c, 16c, 19c)	4%
C 22:6 Methyl Docosahexaenoate (4c, 7c, 10c, 13c, 16c, 19c)	8%

Polyprenol qualitative mixtures

Mixtures of plant origin Lot to lot variations may occur depending on plant origin.

Data sheet

Polyprenol mix C50-C70

Polyprenol mixture of plant origin

Order no. 89-5150

Data sheet

5 mg

Mixture components:

Decaprenol

Undecaprenol

Dodecaprenol

Tridecaprenol

Tetradecaprenol

Polyprenol mix C70-C85

Polyprenol mixture of plant origin

Order no. 89-5170

Data sheet

5 mg

Mixture components:

Tetradecaprenol

Pentadecaprenol

Hexadecaprenol

Heptadecaprenol

Polyprenol mix C90-C140

Order no. 89-5190

Data sheet

5 mg

Mixture components:

Octadecaprenol

Nonadecaprenol

Eicosaprenol

Heneicosaprenol

Docosaprenol

Tricosaprenol

Tetracosaprenol

Pentacosaprenol

Hexacosaprenol

Heptacosaprenol

Octacosaprenol

Polyprenol mix C90-C120

Order no. 89-5195

Data sheet

5 mg

Mixture components:

Octadecaprenol

Nonadecaprenol

Eicosaprenol

Heneicosaprenol

Docosaprenol

Tricosaprenol

Tetracosaprenol

Polar Lipids Mixture

Purity (components): 98+%

POL mix 71

Equal weight%

Order no. 90-3071

Delivered in solution 10 mg

Mixture components:

PC (egg)

PE (egg)

PI (wheat germ (Na salt))

PG (egg PC)

PS (spinal cord, bovine)

Cardiolipin (CL), ammonium salt (bovine)

n-Paraffins (n-Alkanes) Mixture

Purity (components): 99 %

Documentation: GC

HC Mixture 11

Equal weight %

Order no. 90-0511

Delivered neat 100 mg

Mixture components:

C 10:0 Decane

C 11:0 Undecane

C 12:0 Dodecane

C 13:0 Tridecane

C 14:0 Tetradecane

Qualmix Fatty Acid Mixtures

Qualmix PUFA Fish N Natural Fish Oil

100mg 89-5555

Natural mixture of fatty acids from fish oil. Product documentation included.

Composition

C-Nr Fettsäure

- C 14:0 Tetradecanoic acid
- C 16:0 Hexadecanoic acid
- C 16:1 Palmitoleic acid (9c)
- C 18:1 ω 9 Oleic acid (9c)
- C 18:1 ω 7 Vaccenic acid (11c)

C 18:2 Linoleic acid (9c, 12c)

C 18:4 ω 3 Octadecatetraenoic (Stearidonic) acid (6c, 9c, 12c, 15c)

C 20:1 Eicosenoic acid (11c)

C 20:2 Eicosadienoic acid (11c, 14c)

C 20:5 ω 3 Eicosapentaenoic acid (5c, 8c, 11c, 14c, 17c)

C 22:1 ω 9 Erucic acid (13c)

C 22:1 ω 11 Docosenoic acid (11c)

C 22:5 ω 3 Docosapentaenoic acid (7c, 10c, 13c, 16c, 19c)

C 22:6 ω 3 Docosahexaenoic acid (4c, 7c, 10c, 13c, 16c, 19c)

Qualmix PUFA Fish M Natural Menhaden oil

100mg 89-5560

Natural mixture of fatty acids from Menhaden oil. Product documentation included.

Composition

C-Nr Fettsäure

C 14:0 Tetradecanoic acid

C 16:0 Hexadecanoic acid

C 16:1 Palmitoleic acid (9c)

C 16:2 ω 4 Hexadecadienoic acid (9c, 12c)

C 16:3 ω 4 Hexadecatrienoic acid (6c, 9c, 12c)

C 18:0 Octadecanoic acid

C 18:1 ω 9 Oleic acid (9c)

C 18:1 ω 7 Vaccenic acid (11c)

C 18:2 Linoleic acid (9c, 12c)

C 18:2 ω 4 Octadecadienoic acid (11c, 14c)

C 18:3 ω 3 Linolenic acid (9c, 12c, 15c)

C 18:3 ω 4 Octadecatrienoic acid (8c, 11c, 14c)

C 18:4 ω 3 Octadecatetraenoic (Stearidonic) acid (6c, 9c, 12c, 15c)

C 20:1 Eicosenoic acid (11c)

C 20:4 ω 6 Arachidonic acid (5c, 8c, 11c, 14c)

C 20:4 ω 3 Omega3-Arachidonic acid (8c, 11c, 14c, 17c)

C 20:5 ω 3 Eicosapentaenoic acid (5c, 8c, 11c, 14c, 17c)

C 21:5 ω 3 Heneicosapentaenoic acid (6c, 9c, 12c, 15c, 18c)

C 22:5 ω 3 Docosapentaenoic acid (7c, 10c, 13c, 16c, 19c)

C 22:6 ω 3 Docosahexaenoic acid (4c, 7c, 10c, 13c, 16c, 19c)

Qualmix PUFA Porcine T

100mg 89-5570

Natural mixture of fatty acids from pig tallow. Product documentation included.

Composition

C-Nr Fettsäure

C 14:0 Tetradecanoic acid
C 16:0 Hexadecanoic acid
C 16:1 Palmitoleic acid (9c)
C 18:0 Octadecanoic acid
C 18:1 ω 9 Oleic acid (9c)
C 18:1 ω 7 Vaccenic acid (11c)
C 18:2 Linoleic acid (9c, 12c)
C 18:3 ω 6 Gamma Linolenic acid (6c, 9c, 12c)
C 18:3 ω 3 Linolenic acid (9c, 12c, 15c)
C 20:1 Eicosenoic acid (11c)
C 20:2 Eicosadienoic acid (11c, 14c)
C 20:3 ω 6 Homogamma Linolenic acid (8c, 11c, 14c)
C 20:4 ω 6 Arachidonic acid (5c, 8c, 11c, 14c)
C 20:5 ω 3 Eicosapentaenoic acid (5c, 8c, 11c, 14c, 17c)
C 22:4 ω 6 Docosatetraenoic acid (7c, 10c, 13c, 16c)
C 22:5 ω 3 Docosapentaenoic acid (7c, 10c, 13c, 16c, 19c)
C 22:6 ω 3 Docosahexaenoic acid (4c, 7c, 10c, 13c, 16c, 19c)

Unser Datenschutz entsprechend DSGVO.

Wir nehmen die Sicherheit der Daten unserer Kunden und Lieferanten ernst. Die uns von den Kunden oder den Lieferanten übermittelten Daten (Firma, Namen, Adressen, Produkte) werden nur aufbewahrt, wenn sie unserem tatsächlichen Interesse dienen (Lieferung oder Kauf von Waren).

Das Programm für die Auftragsabwicklung wird auf einem Rechner ausgeführt, der nicht an das Internet angeschlossen werden kann (Auftragsbestätigung, Lieferschein, Rechnung; Produkt- und Kundenstatistik,). Diese Dokumente werden per Post übermittelt. Sollte eines dieser Formulare über das Internet als ...pdf-Datei an den Kunden übermittelt werden, so werden diese abgeleiteten Daten aus dem Internetrechner nach einem Jahr gelöscht.

Mit dem Schreibprogramm (Open Office) erstellte Telefaxvorlagen werden auf dem Rechner 1 Jahr gespeichert und dann gelöscht, während die Papierunterlage in den Akten verbleibt.

Von Kunden erhaltene Internet anfragen, -aufträge und -antworten bleiben auf unserem Rechner, wenn daraus eine Geschäftsbeziehung folgt. Die o.a. Papierunterlagen mit den Aufträgen u.s.w. werden nach 10 Jahren gemäß den rechtlichen Möglichkeiten der Vernichtung von Buchhaltungsunterlagen gelöscht. Andere Anfragen werden nach 3 Jahren gelöscht. Dasselbe gilt für den Geschäftsverkehr mit Lieferanten.

Uns zur Verfügung gestellte Namen und Adressen von Kunden geben wir nur dann an unsere Lieferanten weiter, wenn damit eine direkte Lieferung durch den Lieferanten verbunden ist. Dem Kunden wird dieser Sachverhalt vorher mitgeteilt.

Unsere Webseite benutzt cookies, um die Internetnutzung zu vereinfachen. Sie als Kunde oder Lieferant können eine Dokumentation der bei uns über Sie gespeicherten Daten haben. Wir senden Ihnen einen Ausdruck oder eine Diskette im DOS-Format. Die Diskette bitten wir zurückzusenden.

Verantwortlich: Dr. Wolfgang Adam (adam@chemie-plus-service.de)
